7<sup>th</sup> Grade

Clarksville-Montgomery County School System

Montgomery Central Middle School

### How I use my knowledge of science and social studies!

Skills I've learned in science and social studies have provided me with the knowledge to start preparing for college. In science we have been learning about the human body, and some of the nervous system. The human body and nerves link to the job of (in my case) a forensic anthropologist. Forensic anthropology also deals with archaeology, which I have learned in social studies.

When someone goes to college for forensic anthropology they go through six to ten years of college, and many different courses. These incorporate courses like anthropology (cultural and physical), archaeology, and courses like osteology and anatomy. In social studies we learned a little bit about archaeology and anthropology. Using this knowledge I was able to research the courses, and I am able to prepare for them.

In science we are learning about the human body (skeletal and muscles/tissue/etc.) and nerves. In forensic anthropology you have to learn osteology, which is the study of the structure and function of the skeleton and bone structures. Since we are learning about the skeletal system that is pretty much osteology, so I can use that to my advantage of preparing for that course.

Since anatomy is the study of the structure of the body and how different organs relate to one another in a body, we are basically learning a little about anatomy too. Anatomy is one of the courses I will have to take in college. Using my knowledge from class I am able to prepare for the courses I will have to take in college.

In conclusion, I am using what I learned in science and social studies to prepare for college. I am using my knowledge of anthropology, archaeology, osteology/human body (skeletal), and anatomy/human body (muscles, tissue, etc.) to do so. This will not only ensure efficiency in my college studies, but it is also using my knowledge in the real world which will help me in class.
