

Vincent Gould

6th Grade

Kingsport City Schools

Robinson Middle School

I try to use knowledge from all my classes to help myself in real world situations, whatever they may be. (That includes homework!) In this case, I must find examples of knowledge from my social studies and/or science classes that I use in a real world situation.

An example I thought of was how I use/used my knowledge of inertia, friction, gravity, and aerodynamics that I learned in my science classes to build small wooden cars, called pine wood derby cars. Each year my scout troop annually holds a race to figure out which car is the fastest. Each year I improve the speed and reduce all factors that slow it down with my new found knowledge and skills. Another example of how I use my knowledge from my science classes, is when I must build a fire using my knowledge about heat, energy, convection, and again, friction to build fires for cooking and warmth on camping trips with my scout troop.

In the future I plan on using some of the basic fundamentals of science such as the engineering design process and the scientific method to help myself along with others in a job or other situation. (Hopefully to the better benefit!) I hope I succeed! Thank you for reading this.
