

## Tennessee Public Charter School Achievement And Growth

Since 2021, public charter schools have seen significant increases in student proficiency across both English language arts (ELA) and math. Across subjects, public charters have caught up to pre-pandemic performance levels, showing larger growth compared to district peers.

Public Charter Students Grew More Than District Peers In Recent Years

Eighty Percent Of Public Charters Met Or Exceeded Growth Expectations

Compared to district and state peers, public charter schools had a larger proportion of schools meeting or exceeding student growth expectations in 2023. Additionally, 61 percent of public charters earned the highest growth rating compared to less than one-third of district and state peers. The Tennessee Value-Added Assessment System (TVAAS) measures student growth year over year. When paired with achievement results, TVAAS as a growth measure offers a complete picture of student learning and the potential for improving success rates.
